

## **OUR FIELD TRIP TO ENSTA**

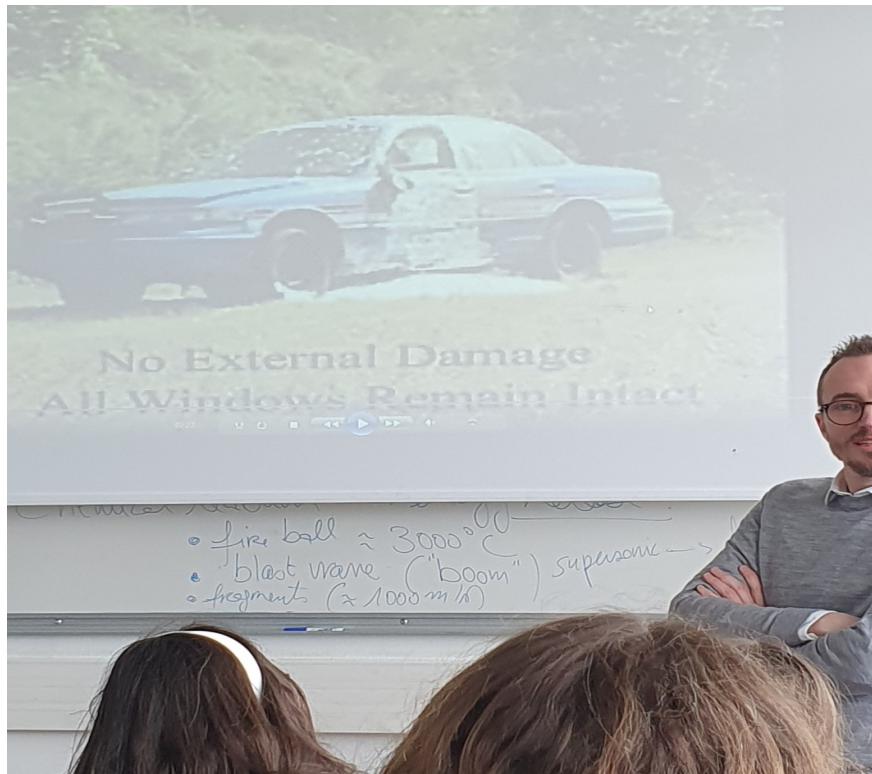

The 3<sup>e</sup> LCE and the students of *L codent L créent* went to the ENSTA (= *Ecole Nationale Supérieure de Techniques Avancées*) in Brest on 24th February 2025.

The truck in the middle of the picture is in the ENSTA because one of the students of this university assisted with the building of the truck.

On the right we can see three students of this university who do the visit of the university. (Loris)

**Martin, Associate Professor** - In this picture, we can see the name, the age and the profession of our professor. His name is Martin, he is 35 years old and he is an associate professor which means he does research and he gives lectures to pupils. He studied in Nice for 5 years, after this, he travelled to the United States and he studied in Harvard for 6 months, then he went to Swansea in Wales where he worked in a laboratory. (Manech)

Martin, who is a physics teacher, showed us an experiment about pyrotechnics. In this picture, we can see a car filled with foam. The teacher said that if there is an explosion with foam there is less damage. (Mathilde and Amandine)

This is one of the machines students can use in the machinery room.  
(Thyphaine and Heloïse)

This is a photo of a laboratory where the students work. There is a boat and some other machines for students who create robots in ENSTA. The robots are designed to go on the sea.  
( Maïna and Margot)

This is a drone, created by ENSTA students. They can test it on the pool in that laboratory.  
( Lison and Awena)

This is the Hall of Residence for students. The pupils' rooms are in the background. It's where the students of the ENSTA can live during school days. The first-year students have priority to live there. (Arthur)

In this picture we can see the LCE group. At this moment we were eating *crêpes* made by ENSTA's students in the students' common room. In this room there is a bar, many sofas and games like billiards and football table. (Léa and Calie)
